Table 99. Number of Avoidable ED Visits and Rate Per 1,000 Population by Zip Code, Bradford County and Florida, 2006-2008	109

Notes

Note on Crude Versus Age-Adjusted Mortality Rates

The Needs Assessment Technical Report presents both the crude and age-adjusted death rates (AADR). Crude rates are merely the actual number of deaths for a given cause for a desired population divided by total number in the desired population and then multiplied by 100,000 to get the rate per 100,000 population, while AADR represent crude rates adjusted to standardize the population distribution effects on the rate.

Although useful for certain purposes, the crude death rate as a comparative measure has a major shortcoming: it is a function of the age distribution of the population at risk. For example, the population at risk in one county may be primarily elderly persons ages 65 and older while the population at risk in another county may be primarily of persons ages 40 to 50. Crude rates are recommended when a summary measure is needed and it is not necessary or desirable to adjust for other factors.

The frequency with which health events occur is almost always related to age. In fact, the relationship of age to risk often dwarfs other important risk factors. For example, acute respiratory infections are more common in children of school age because of their immunologic susceptibility and exposure to other children in schools. Chronic conditions, such as arthritis and atherosclerosis, occur more frequently in older adults because of a variety of physiologic consequences of aging. Mortality rates tend to increase after the age of 40.

Because the occurrence of many health conditions is related to age, the most common adjustment for public health data is age adjustment. The age-adjustment process removes differences in the age composition of two or more populations to allow comparisons between these populations independent of their age structure.

The age-adjusted death rate is a summary measure that eliminates the effect of the underlying age distribution of the population. The result is a figure that represents the theoretical risk of mortality for a population, if the population had an age distribution identical to that of a standard population. For example, a county's age-adjusted death rate is the weighted average of the age-specific death rates observed in that county, with the weights derived from the age distribution in an external population standard, such as the U.S. population.

Age-adjustment then allows for the comparison of two distinct populations (for example, Bradford County versus Florida) which most likely have differing age distributions. The age effects are in essence removed from the rates and the age-adjusted death rate then no longer reflects the actual death rate but is an indicator rate that can be used for relative comparisons.

In the past, the National Center for Health Statistics (NCHS) age-adjusted rates using the US 1940 standard population. Other agencies used the US 1970 Standard. Beginning with 1999 data, federal agencies began age-adjusting to the US 2000 Standard Million Population.

Note on Zip Codes

For tables with zip codes listed, the post office box zip codes are included with the main zip codes. To provide the most accurate data summary for the county, for each data element presented by zip code, the total sum of the zip code data is presented as well as the overall county totals. Post office zip code 32042 Graham is included with 32044(Hampton).

When data is presented by zip codes for deaths and births, a five year rate is calculated due to the small numbers by zip code. Some Hispanic data was not available by zip code or else the numbers were too small to separate out.

All data are presented at the county level and state level for each indicator. Zip Code level data are presented where available.

Table 21. Number and Percent Uninsured by Age Groups for All Income Levels, Bradford County and Florida, 2007.

Area	Number of Uninsured	MOE ¹ For Number Uninsured	Number in Demographic Group ² for All Income Levels	Percent Uninsured in Demographic Group ² for All Income Levels	MOE ¹ for Percent Uninsured in Demographic Group for All Income Levels
Under 65 years of age, All Income Levels					
Bradford County	4,228	559	20,623	20.5	2.7
Florida	3,615,358	96,020	14,921,470	24.2	0.6
18 - 64 years of age, All Income Levels					
Bradford County	3,362	503	14,840	22.7	3.4
Florida	2,925,739	83,638	10,909,695	26.8	0.8
40 - 64 years of age, All Income Levels					
Bradford County	1,329	299	7,793	17.1	3.8
Florida	1,300,836	47,803	5,961,875	21.8	0.8
Under 19 years of age, All Income Levels					
Bradford County	935	255	6,124	15.3	4.2
Florida	750,257	70,705	4,238,135	17.7	1.7

¹ A margin of error (MOE) is the difference between an estimate and its upper or lower confidence bounds. Confidence bounds can be created by adding a margin of error to the estimate (for an upper bound) and subtracting the margin of error from the estimate (for a lower bound). All published margins of error for the Small Area Health Insurance Estimates program are based on a 90 percent confidence level.

² The number in a demographic group is the number of people in the poverty universe in that age, sex, and race/Hispanic origin group.

Table 48. DRGs Used to Define the Hospitalizations for Mental Health Issues.

These DRGs were used from 2004 - 3rd Quarter 2007 discharge data.	
424	OR Procedure with principal diagnosis of mental illness
425	Acute adjustment reactions and psychosocial dysfunction
426	Depressive neuroses
427	Neuroses except depressive
428	Disorders of personality and impulse control
430	Psychosis
431	Childhood mental disorders
432	Other mental disorders diagnoses
433	Alcohol/drug abuse of dependence, left against medical advice
521	Alcohol/drug abuse or dependence
522	Alcohol/drug abuse or dependence with rehab
523	Alcohol/drug abuse or dependence without rehab
From the 4th Qtr 2007 - 2008 discharge data, the following MS-DRGs were used.	
876	OR Procedure with principal diagnosis of mental illness
880	Acute adjustment reactions and psychosocial dysfunction
881	Depressive neuroses
882	Neuroses except depressive
883	Disorders of personality and impulse control
885	Psychosis
886	Behavioral & Developmental Disorders
887	Other mental disorders diagnoses
894	Alcohol/drug abuse or dependence, left against medical advice
895	Alcohol/drug abuse or dependence with rehabilitation therapy
896	Alcohol/drug abuse or dependence w/o rehabilitation therapy with MCC
897	Alcohol/drug abuse or dependence w/o rehabilitation therapy w/o MCC

Table 99. Number of Avoidable ED Visits and Rate Per 1,000 population by Zip Code, Bradford County and Florida, 2006-2008.*

Area	Average Population (2006-2008)	Total Avoidable ED Visits	Average ED Visits	Rate Per 1,000 Population
32044 Hampton	2,358	1,868	623	264.1
32058 Lawtey	6,277	3,036	1,012	161.2
32091 Starke	17,337	13,978	4,659	268.8
32622 Brooker	2,075	954	318	153.3
Bradford County	29,640	19,836	6,612	223.1
Florida	18,830,449	8,593,067	2,864,356	152.1

* ED Visits are classified into four categories using the NYU Algorithm: (1) Non Emergent, (2) Emergent/primary care treatable, (3) Emergent/emergency department care required but preventable/avoidable, (4) Emergent/emergency department care required, not preventable/avoidable. Therefore, the first three were combined to create the total number of avoidable ED visits.
