Table 100. Number and Percent of the Main Reason of Emergency Department Visits by Year, Hamilton County, Calendar Years 2005-09.	127
Table 101. Number of Avoidable ED Visits and Rate Per 1,000 Population by Zip Code, Hamilton County and Florida, 2005-2009	129

Notes

Note on Using Census Data Percentages

When 2010 data is not available then percents based on the Census data are used in computing estimated 2010 numbers. These numbers and percents are marked in the applicable tables.

Note on Crude Versus Age-Adjusted Mortality Rates

The Needs Assessment Technical Report presents both the crude and age-adjusted death rates (AADR). Crude rates are merely the actual number of deaths for a given cause for a desired population divided by total number in the desired population and then multiplied by 100,000 to get the rate per 100,000 population, while AADR represent crude rates adjusted to standardize the population distribution effects on the rate.

Although useful for certain purposes, the crude death rate as a comparative measure has a major shortcoming: it is a function of the age distribution of the population at risk. For example, the population at risk in one county may be primarily elderly persons ages 65 and older while the population at risk in another county may be primarily of persons ages 40 to 50. Crude rates are recommended when a summary measure is needed and it is not necessary or desirable to adjust for other factors.

The frequency with which health events occur is almost always related to age. In fact, the relationship of age to risk often dwarfs other important risk factors. For example, acute respiratory infections are more common in children of school age because of their immunologic susceptibility and exposure to other children in schools. Chronic conditions, such as arthritis and atherosclerosis, occur more frequently in older adults because of a variety of physiologic consequences of aging. Mortality rates tend to increase after the age of 40.

Because the occurrence of many health conditions is related to age, the most common adjustment for public health data is age adjustment. The age-adjustment process removes differences in the age composition of two or more populations to allow comparisons between these populations independent of their age structure.

The age-adjusted death rate is a summary measure that eliminates the effect of the underlying age distribution of the population. The result is a figure that represents the theoretical risk of mortality for a population, if the population had an age distribution identical to that of a standard population. For example, a county's age-adjusted death rate is the weighted average of the age-specific death rates observed in that county, with the weights derived from the age distribution in an external population standard, such as the U.S. population.

Age-adjustment then allows for the comparison of two distinct populations (for example, Hamilton County versus Florida) which most likely have differing age distributions. The age effects are in essence removed from the rates and the age-adjusted death rate then no longer reflects the actual death rate but is an indicator rate that can be used for relative comparisons.

In the past, the National Center for Health Statistics (NCHS) age-adjusted rates using the US 1940 standard population. Other agencies used the US 1970 Standard. Beginning with 1999 data, federal agencies began age-adjusting to the US 2000 Standard Million Population.

Note on Zip Codes

For tables with zip codes listed, the post office box zip codes are included with the main zip codes. To provide the most accurate data summary for the county, for each data element presented by zip code, the total sum of the zip code data is presented as well as the overall county totals.

When data is presented by zip codes for deaths and births, a five year rate is calculated due to the small numbers by zip code. Some Hispanic data was not available by zip code or else the numbers were too small to separate out.

All data are presented at the county level and state level for each indicator. Zip Code level data are presented where available.

Note on Death Data

The various causes of death that are presented in this report are included in the following table along with the ICD 10 Codes that identify them. When ranking the causes of deaths for a county or for Florida they are ranked by the total number of deaths per disease for either the single year, three-year or five-year period and are labeled where applicable.

Cause of Death	ICD 10 Codes
All Causes	All Codes
Alzheimer's Disease	G30
Cancer	C00-C97
Chronic Liver Disease & Cirrhosis (Liver Disease)	K70, K73-K74
Chronic Lower Respiratory Disease (CLRD)	J40-J47
Congenital & Chromosomal Anomalies	Q00-Q99
Diabetes	E10-E14
Essential Hypertension & Hypertensive Renal Disease (Hypertension)	I10, I12
Heart Disease	I00-I09, I11, I13, I20-I51
HIV/AIDS (HIV)	B20-B24
Homicide	X85-Y09, Y87.0
Influenza & Pneumonia	J10-J18
Motor Vehicle Traffic Crashes (MV Crashes) *	V02-V04, V09.0, V09.2, V12-V14, V19.0-V19.2, V19.4-V19.6, V20-V79, V80.3-V80.5, V81.0-V81.1, V82.0-V82.1, V83-V86, V87.0-V87.8, V88.0-V88.8, V89.0, V89.2
Nephritis, Nephrotic Syndrome & Nephrosis (Nephritis)	N00-N07, N17-N19, N25-N27
Parkinson's Disease	G20-G21
Perinatal Conditions	P00-P96
Septicemia	A40-A41
Sudden Infant Death Syndrome (SIDS)	R95
Stroke	I60-I69
Suicide	X60-X84, Y87.0
Sudden Unexpected Infant Deaths (SUID)	W75-W77, W81-W84, R95, R99
Unintentional Injuries	V01-X59, Y85-Y86

* Motor Vehicle Traffic Crashes are shown in various death tables, please note that the data is a subset of unintentional injuries and they are shown separately but not shown as part of the rank order of causes of deaths.

Florida	18,917,612	425,893	2.3

The group quarters population includes all people not living in households. Two general categories of people in group quarters are recognized by the Census: (1) the institutionalized population and (2) the noninstitutionalized population. The institutionalized population includes people under formally authorized, supervised care or custody in institutions at the time of enumeration; such as correctional institutions, nursing homes and juvenile institutions. The noninstitutionalized population includes all people who live in group quarters other than institutions, such as college dormitories, military quarters, and group homes. Also, included are staff residing at institutional group quarters.

Hamilton County	9,921	3,262	3.04
Florida	14,833,812	4,882,567	3.04

A family includes a householder and one or more other people living in the same household who are related to the householder by birth, marriage, or adoption. All people in a household who are related to the householder are regarded as members of his or her family. A family household may contain people not related to the householder, but those people are not included as part of the householders family in census tabulations. Thus, the number of family households is equal to the number of families, but family households may include more members than do families. A household can contain only one family for purposes of census tabulations. Not all households contain families since a household may be comprised of a group of unrelated people or of one person living alone.

Hamilton County	11,704	4,598	2.55
Florida	18,491,719	7,448,581	2.48

A household includes all of the people who occupy a housing unit. (People not living in households are classified as living in group quarters.) A housing unit is a house, an apartment, a mobile home, a group of rooms, or a single room occupied (or if vacant, intended for occupancy) as separate living quarters. Separate living quarters are those in which the occupants live separately from any other people in the building and that have a direct access from the outside of the building or through a common hall. The occupants may be a single family, one person living alone, two or more families living together, or any other group of related or unrelated people who share living quarters.

Florida	4,882,567	5.9	288,071	77.5	3,783,989

* A family includes a householder and one or more other people living in the same household who are related to the householder by birth, marriage, or adoption. All people in a household who are related to the householder are regarded as members of his or her family. A family household may contain people not related to the householder, but those people are not included as part of the householders family in census tabulations. Thus, the number of family households is equal to the number of families, but family households may include more members than do families. A household can contain only one family for purposes of census tabulations. Not all households contain families since a household may be comprised of a group of unrelated people or of one person living alone.

Area	Number of Uninsured	MOE ¹ For Number Uninsured	Number in Demographic Group ² for All Income Levels	Percent Uninsured in Demographic Group ² for All Income Levels	MOE ¹ for Percent Uninsured in Demographic Group for All Income Levels
Under 65 years of age, All Income Levels					
Hamilton County	1,943	262	9,676	20.1	2.7
Florida	3,615,358	96,020	14,921,470	24.2	0.6
18 - 64 years of age, All Income Levels					
Hamilton County	1,592	239	6,802	23.4	3.5
Florida	2,925,739	83,638	10,909,695	26.8	0.8
40 - 64 years of age, All Income Levels					
Hamilton County	652	154	3,722	17.5	4.1
Florida	1,300,836	47,803	5,961,875	21.8	0.8
Under 19 years of age, All Income Levels					
Hamilton County	378	108	3,002	12.6	3.6
Florida	750,257	70,705	4,238,135	17.7	1.7

¹ A margin of error (MOE) is the difference between an estimate and its upper or lower confidence bounds. Confidence bounds can be created by adding a margin of error to the estimate (for an upper bound) and subtracting the margin of error from the estimate (for a lower bound). All published margins of error for the Small Area Health Insurance Estimates program are based on a 90 percent confidence level.

² The number in a demographic group is the number of people in the poverty universe in that age, sex, and race/Hispanic origin group.

Mental Health Data Tables

Table 47. DRGs Used to Define the Hospitalizations for Mental Health Issues.

These DRGs were used from 2005 - 3rd Quarter 2007 discharge data.	
424	OR Procedure with principal diagnosis of mental illness
425	Acute adjustment reactions and psychosocial dysfunction
426	Depressive neuroses
427	Neuroses except depressive
428	Disorders of personality and impulse control
430	Psychosis
431	Childhood mental disorders
432	Other mental disorders diagnoses
433	Alcohol/drug abuse of dependence, left against medical advice
521	Alcohol/drug abuse or dependence
522	Alcohol/drug abuse or dependence with rehab
523	Alcohol/drug abuse or dependence without rehab
From the 4th Qtr 2007 - 2009 discharge data, the following MS-DRGs were used.	
876	OR Procedure with principal diagnosis of mental illness
880	Acute adjustment reactions and psychosocial dysfunction
881	Depressive neuroses
882	Neuroses except depressive
883	Disorders of personality and impulse control
885	Psychosis
886	Behavioral & Developmental Disorders
887	Other mental disorders diagnoses
894	Alcohol/drug abuse or dependence, left against medical advice
895	Alcohol/drug abuse or dependence with rehabilitation therapy
896	Alcohol/drug abuse or dependence w/o rehabilitation therapy with MCC
897	Alcohol/drug abuse or dependence w/o rehabilitation therapy w/o MCC

Hamilton County	14,681	9,081	3,027	206.2
Florida	18,830,449	7,220,904	2,406,968	127.8
2007-2009				
32052 Jasper	9,249	4,638	1,546	167.2
32053 Jennings	3,567	1,494	498	139.6
32096 White Springs	2,781	2,380	793	285.3
Zip Code Total	15,597	8,512	2,837	181.9
Hamilton County	14,710	8,210	2,737	186.0
Florida	19,011,550	7,515,221	2,505,074	131.8

* ED Visits are classified into four categories using the NYU Algorithm: (1) Non Emergent, (2) Emergent/primary care treatable, (3) Emergent/emergency department care required but preventable/avoidable, (4) Emergent/emergency department care required, not preventable/avoidable. Therefore, the first three were combined to create the total number of avoidable ED visits.
