PLEASE NOTE: DO NOT COMPARE 2016 RANKS FOR QUALITY OF LIFE AND HEALTH BEHAVIORS WITH PREVIOUS RANKS. In previous RWJ releases, the CDC provided BRFSS data with estimates based on seven years of combined data. 2016 Ranks, used only 2014 data to construct estimates. Historically, BRFSS was based on landline telephones. In 2011, cell-only users were included for the first time. RWJ said that the data from 2011 onward could not be easily combined with earlier years to create the RWJ county estimates. CDC doesn't release data when there are fewer than 50 responses, so in about 90 percent of the counties, in order to get more than 50, they would combine seven years of survey responses. CDC only provided 2014 county-by-county data to RWJ this year, using a different modeling technique so they could include cell phone data. The Health Rankings are a point in time ranking and really shouldn't be compared to other years due to changes in data sources, time frames and any other methodology changes.

TABLE 2. COUNTY HEALTH RANKINGS FOR LAFAYETTE AND SUWANNEE COUNTIES COMPARED TO FLORIDA, 2017.

	Lafayette County	Suwannee County	Florida
HEALTH OUTCOMES (Rank of 67)	6	54	
Length of Life (Rank of 67)	6	51	
Premature death	5,814	9,026	6,721
Quality of Life (Rank of 67)	16	49	
Poor or fair health (Percent)	16.4	17.7	17.1
Poor physical health days	4.1	4.5	4.2
Poor mental health days	4.1	4.3	4.2
Low Birthweight (Percent)	6.9	8.4	8.7
HEALTH FACTORS (Rank of 67)	40	55	
Health Behaviors (Rank of 67)	50	51	
Adult smoking (Percent)	19	20.1	15.8
Adult obesity (Percent)	35	33.3	25.7
Food Environment Index	7.0	6.3	7.1
Physical inactivity (Percent)	32.8	29.0	23.1
Access to exercise opportunities (Percent)	39.0	48.9	92.0
Excessive drinking (Percent)	20.3	17.1	17.4
Alcohol-impaired driving deaths (Percent)	46.2	35.1	28.2
Sexually transmitted infections rate	146.9	297.3	430.6
Teen birth rate	48.8	52.7	30.6
Clinical Care (Rank of 67)	58	56	
Uninsured adults (Percent)	24.2	21.0	20.2
Primary care physicians	8,835:1	4,891:1	1,379:1
Dentists		4,862:1	1,793:1
Mental health providers	8,663:1	3,647:1	747:1
Preventable hospital stay rate	52.0	86.4	55.1
Diabetes screening (Percent)	84.9	84.3	85.6
Mammography screening (Percent)	49.2	65.2	67.9

^{*90}th percentile, i.e., only 10% are better. Blank (---)values reflect unreliable or missing data. Source: University of Wisconsin Population Health Institute, County Health Rankings website http://www.countyhealthrankings.org, 2017.

TABLE 2 CONT. COUNTY HEALTH RANKINGS FOR LAFAYETTE AND SUWANNEE COUNTIES COMPARED TO FLORIDA, 2017.

	Lafayette County	Suwannee County	Florida
Social & Economic Factors (Rank of 67)	11	54	
High school graduation (Percent)	87.5	68.0	77.9
Some college (Percent)	36.7	37.7	61.3
Unemployment (Percent)	4.5	5.5	5.4
Children in poverty (Percent)	29.5	35.2	23.4
Income Inequality (Ratio)	5.2	4.5	4.7
Children in single-parent households (Percent)	17.9	41.5	38.4
Social Associations rate	17.0	11.4	7.2
Violent crime rate	290.8	415.9	499.6
Injury death rate	77.1	98.6	69.3
Physical Environment (Rank of 67)	27	12	
Air Pollution Particulate Matter Days	7.5	7.9	7.4
Drinking water violations (Presence of violation)	Yes	No	
Severe housing problems (Percent)	17.0	15.3	22.0
Driving alone to work (Percent)	75.4	77.3	79.6
Long commute - driving alone (Percent)	31.0	40.0	38.8

MAP 3. LAFAYETTE AND SUWANNEE COUNTIES WITH ZIP CODES.

Zip codes in Lafayette County include 32066 Mayo. Suwannee County zip codes are 32008 (Branford), 32060 (Live Oak), 32062 (McAlpin), 32064 (Live Oak), 32071 (O'Brien), and 32094 (Wellborn). Areas above in the map that are not colored in are either zip codes that have just a small portion in Lafayette or Suwannee County or include the wildlife management area.

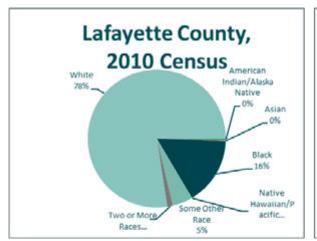

OFFICIAL 2010 CENSUS COUNTS

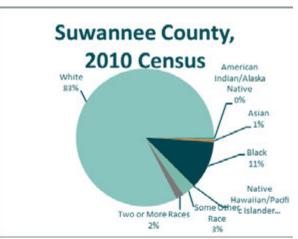

The Following tables are the official counts of the United States Census Bureau.

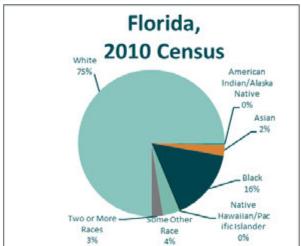

The United States Census Bureau collects data by United States Postal Service (USPS) zip codes. Based on zip code data the Census Bureau then aggregates Zip Code Tabulation Area (ZCTAs) from addresses contained within each block. This allows the aggregated data to be converted into areal feature datasets (ZCTAs). For complete information, please see http://www.census.gov/geo/reference/zctas.html.

Suwannee County	41,551	1,393	3.4		
Florida	18,801,310	421,709	2.2		

The group quarters population includes all people not living in households. Two general categories of people in group quarters are recognized by the Census: (1) the institutionalized population and (2) the noninstitutionalized population. The institutionalized population includes people under formally authorized, supervised care or custody in institutions at the time of enumeration; such as correctional institutions, nursing homes and juvenile institutions. The noninstitutionalized population includes all people who live in group quarters other than institutions, such as college dormitories, military quarters, and group homes. Also, included are staff residing at institutional group quarters.

Suwannee County	32,774	11,035	2.97
Florida	14,539,749	4,835,475	3.01

A family includes a householder and one or more other people living in the same household who are related to the householder by birth, marriage, or adoption. All people in a household who are related to the householder are regarded as members of his or her family. A family household may contain people not related to the householder, but those people are not included as part of the householders family in census tabulations. Thus, the number of family households is equal to the number of families, but family households may include more members than do families. A household can contain only one family for purposes of census tabulations. Not all households contain families since a household may be comprised of a group of unrelated people or of one person living alone. Source: US Census Bureau, 2010 Census, Tables P35, P36, P37.

A household includes all of the people who occupy a housing unit. (People not living in households are classified as living in group quarters.) A housing unit is a house, an apartment, a mobile home, a group of rooms, or a single room occupied (or if vacant, intended for occupancy) as separate living quarters. Separate living quarters are those in which the occupants live separately from any other people in the building and that have a direct access from the outside of the building or through a common hall. The occupants may be a single family, one person living alone, two or more families living together, or any other group of related or unrelated people who share living quarters.

Florida	19,645,772	430,146	2.2		

The group quarters population includes all people not living in households. Two general categories of people in group quarters are recognized by the Census: (1) the institutionalized population and (2) the noninstitutionalized population. The institutionalized population includes people under formally authorized, supervised care or custody in institutions at the time of enumeration; such as correctional institutions, nursing homes and juvenile institutions. The noninstitutionalized population includes all people who live in group quarters other than institutions, such as college dormitories, military quarters, and group homes. Also, included are staff residing at institutional group quarters.

Although the American Community Survey(ACS) produces population, demographic and housing unit estimates for 2011-2015, the 2010 Census provides the official counts of the population and housing units for the nation, counties, cities, and towns. The American Community Survey is a sample of data taken over a time period and should not be compared to other sources of data.

A family includes a householder and one or more other people living in the same household who are related to the householder by birth, marriage, or adoption. All people in a household who are related to the householder are regarded as members of his or her family. A family household may contain people not related to the householder, but those people are not included as part of the householders family in census tabulations. Thus, the number of family households is equal to the number of families, but family households may include more members than do families. A household can contain only one family for purposes of census tabulations. Not all households contain families since a household may be comprised of a group of unrelated people or of one person living alone.

Although the American Community Survey(ACS) produces population, demographic and housing unit estimates for 2011-2015, the 2010 Census provides the official counts of the population and housing units for the nation, counties, cities, and towns. The American Community Survey is a sample of data taken over a time period and should not be compared to other sources of data.

A household includes all of the people who occupy a housing unit. (People not living in households are classified as living in group quarters.) A housing unit is a house, an apartment, a mobile home, a group of rooms, or a single room occupied (or if vacant, intended for occupancy) as separate living quarters. Separate living quarters are those in which the occupants live separately from any other people in the building and that have a direct access from the outside of the building or through a common hall. The occupants may be a single family, one person living alone, two or more families living together, or any other group of related or unrelated people who share living quarters.

Although the American Community Survey(ACS) produces population, demographic and housing unit estimates for 2011-

2015, the 2010 Census provides the official counts of the population and housing units for the nation, counties, cities, and towns. The American Community Survey is a sample of data taken over a time period and should not be compared to other sources of data.

^{*} A family includes a householder and one or more other people living in the same household who are related to the householder by birth, marriage, or adoption. All people in a household who are related to the householder are regarded as members of his or her family. A family household may contain people not related to the householder, but those people are not included as part of the householders family in census tabulations. Thus, the number of family households is equal to the number of families, but family households may include more members than do families. A household can contain only one family for purposes of census tabulations. Not all households contain families since a household may be comprised of a group of unrelated people or of one person living alone.

TABLE 67. PERCENT OF THE TOTAL STUDENTS THAT WERE ELIGIBLE FOR FREE OR REDUCED LUNCH DURING THE SCHOOL YEAR, LAFAYETTE AND SUWANNEE COUNTIES AND FLORIDA, 2009-2017. *

Year	Lafayette County	Suwannee County	Florida	
2009-2010	56.5	66.1	53.5	
2010-2011	59.0	66.7	56.0	
2011-2012	61.4	68.1	57.6	
2012-2013	60.4	67.7	58.6	
2013-2014 **	61.6	54.3	59.9	
2014-2015	62.8	62.7	60.8	
2015-2016	60.5	48.6	60.2	
2016-2017	57.3	59.9	58.1	

^{*} Data included students in schools with Provision 2 lunch status, in which every student in the school is eligible for free lunch. Please note this change when comparing this data to prior years at the district level. The impact of this inclusion made no notable difference at the state level. The Florida totals include the special districts: Florida School for the Deaf and Blind, Dozier/Okeechobee, Florida Atlantic University Lab School, Florida State University Charter Schools, Florida A & M University Lab School, University of Florida Lab School, Florida Connections Academy and Florida Virtual Academy. ** Starting with the 2013-2014 year, CEP Direct Cert (#C) were also included in the Free or Reduced Lunches. This meant that the student was enrolled in a USDA - approved Community Eligibility Provision (CEP) School and is identified as eligible for free meals based upon the Direct Certification determination or the extension of eligibility to the household due to eligibility of an identified direct certified student.

^{*} The ranking of the causes of deaths in the table are based on the total number of deaths for each county for the time period of 2012-2016 for each type of race. Causes of deaths are shown for the top 10 by each race and for ethnicity as well as where they rank if they are in one of the top 10 by race or ethnicity.

If there is a "t" after the number the total number of deaths tied for those diseases.

The shorter names of the causes of deaths in ()'s above will be used in the rest of the tables in the appendix for the name for that particular cause of death.

Maternal and Infant Health

Various maternal and infant health data is presented at the county level over an extended time period. Ethnicity data is presented in the same tables as the data when broken out by race, Hispanics are not considered a race but a subset of the races. Therefore Hispanics should not be added in with the White and Black's to get a total. Not all races are shown in the table so the sum of these two may not equal what is shown in the total column., Data is presented by Zip Code for the current five-year time period.

Health Behaviors

BEHAVIORAL RISK FACTORS SURVEILLANCE SURVEYS (BRFSS)

TABLE 135. SELECTED BRFSS INDICATORS BY COUNTY AND WHETHER OR NOT THE COUNTY IS WORSE THAN FLORIDA IN 2013.

Indicator	Is Lafayette County Worse Then Florida	Is Suwannee County Worse Then Florida
Health Status Indicators		
Arthritis		
Percentage of adults who have been told they have some form of arthritis, rheumatoid arthritis, gout, lupus or fibromyalgia	Yes	Yes
Percentage of adults who are limited in any way in any usual activities because of arthritis	Yes	Yes
Asthma		
Percentage of adults who currently have asthma	Yes	Yes
Percentage of adults who have ever been told they have had asthma	Yes	No
Cancer Prevalence		
Percentage of adults who have ever been told they had skin cancer	Yes	Yes
Percentage of adults who have ever been told they had any other type of cancer except skin cancer	No	Yes
Cardiovascular Disease		
Percentage of adults who have ever had a stroke	No	Yes
Percentage of adults who have ever been told they had coronary heart disease, heart attack or stroke	No	Yes
Percentage of adults who have ever been told they had angina or coronary heart disease	No	Yes
Percentage of adults who have ever been told they had a heart attack	No	

^{---:} The question was not asked one of the years or data was not available at the county level that year therefore a comparison could not be made.

	111D/111120	
Indicator	Is Lafayette County Worse Then Florida	Is Suwannee County Worse Then Florida
Health Status Indicators Continued		
Cholesterol Awareness		
Percentage of adults who had their cholesterol checked in the past five years	Yes	Yes
Percentage of adults who had their cholesterol checked in the past two years	Yes	Yes
Percentage of adults who have ever been told they had high blood cholesterol	No	No
COPD		
Percent of adults who have ever been told they had chronic obstructive pulmonary disease, emphysema, or chronic bronchitis	Yes	Yes
Depression		
Percentage of Adults who have ever been told they had a depressive disorder	No	Yes
Diabetes		
Percentage of adults who have ever been told they had diabetes	Yes	Yes
Percentage of adults with diabetes who self-monitor blood glucose at least once a day on average	Yes	No
Percentage of adults with diabetes who had two A1C tests in the past year	No	No
Percentage of adults with diabetes who had an annual foot exam	No	Yes
Percentage of adults with diabetes who had an annual eye exam	No	Yes
Percentage of adults with diabetes who ever had diabetes self- management education	Yes	No
Average age at which diabetes was diagnosed	No	
Percentage of adults who have ever been told they had pre-diabetes	Yes	No

^{---:} The question was not asked one of the years or data was not available at the county level that year therefore a comparison could not be made.

Please note: T = Both Sexes, F = Females, M = Males.

Diagnosed = The proportion of adults age 20+ who report a previous diabetes diagnosis (age-standardized). Undiagnosed = The proportion of adults age 20+ who do not report a previous diabetes diagnosis who have high FPG/A1C* (age-standardized). Total = The proportion of adults age 20+ who report a previous diabetes diagnosis and/or have high FPG/A1C* (age-standardized). Awareness = The proportion of adults age 20+ with a previous diabetes diagnosis and/or high FPG/A1C* who have received a diagnosis (age-standardized). Control = The proportion of adults age 20+ with a previous diabetes diagnosis and/or high FGP/A1C* who currently do not have high FPG/A1C* (age-standardized). TABLE 183. COMPARISON OF SELECTED CANCER PREVALENCE INDICATORS BY COUNTY AND FLORIDA, 2013.

Indicator	Lafayette County	Suwannee County	Florida
Percentage of adults who have ever been told they had skin cancer	12.7	14.2	9.2
Percentage of adults who have ever been told they had any other type of cancer except skin cancer	4.3	9.7	7.6

Please note: Due to changes in the weighting methodology and the inclusion of cellular telephones in addition to the landlines, 2013 data should not be compared to previous years of data. Source: Florida Department of Health, Office of Health Statistics & Assessment, reports generated by WellFlorida; using the Health Indicators System; http://www.FLHealthCharts.com; September 18, 2017. Prepared by: WellFlorida Council, 2017.

TABLE 184. COMPARISON OF COLORECTAL CANCER SCREENING INDICATORS BY COUNTY AND FLORIDA, 2013.

Indicator	Lafayette County	Suwannee County	Florida
Percentage of adults 50 years of age and older who received a blood stool test in the past year	4.8	13.4	13.9
Percentage of adults 50 years of age and older who have ever had a blood stool test	25.4	40.5	37.6
Percentage of adults 50 years of age and older who received a sigmoidoscopy or colonoscopy in the past five years	50.4	48.7	55.3
Percentage of adults 50 years of age and older who have ever had a sigmoidoscopy or colonoscopy	59.3	58.7	69.3
Percentage of adults aged 50 to 75 who had colorectal screening, based on the most recent clinical guidelines	54.7	54.0	64.7

Please note: Due to changes in the weighting methodology and the inclusion of cellular telephones in addition to the landlines, 2013 data should not be compared to previous years of data. Source: Florida Department of Health, Office of Health Statistics & Assessment, reports generated by WellFlorida; using the Health Indicators System; http://www.FLHealthCharts.com; September 18, 2017. Prepared by: WellFlorida Council, 2017.

TABLE 185. COMPARISON OF SELECTED PROSTATE CANCER SCREENING INDICATORS BY COUNTY AND FLORIDA, 2013.

Indicator	Lafayette County	Suwannee County	Florida
Percentage of men 50 years of age and older who received a PSA test in the past two years *	54.4	59.3	72.6
Percentage of men ages 50 years of age and older who have ever had a PSA test *	59.4	72.6	85.0
Percentage of men 50 years of age and older who received a digital rectal exam in the past year *	39.6	33.3	48.5
Percentage of men 50 years of age and older who have ever had a digital rectal exam *	72.1	70.7	86.6
Percentage of men 45 years of age and older who have been told they have prostate cancer *	2.0	3.0	7.3

^{*} From the 2010 Survey not the 2013 survey.

Please note: Due to changes in the weighting methodology and the inclusion of cellular telephones in addition to the landlines, 2013 data should not be compared to previous years of data.

TABLE 186. COMPARISON OF SELECTED WOMEN'S HEALTH CANCER SCREENING INDICATORS BY COUNTY AND FLORIDA, 2013.

Indicator	Lafayette County	Suwannee County	Florida
Percentage of women 40 years of age and older who received a mammogram in the past year	45.3	51.8	57.5
Percentage of women 40 years of age and older who had a clinical breast exam in the past year	71.2	53.2	58.8
Percentage of women 18 years of age and older who had a clinical breast exam in the past year	62.7	57.2	56.0
Percent of women aged 40 to 74 who received a mammogram in the past year	45.3	51.8	57.5
Percentage of women aged 50 - 74 who had a mammogram in the past 2 years	80.3	63.8	77.4
Percentage of women 18 years of age and older who received a Pap test in the past year	64.7	48.6	51.4
Percentage of women aged 21 to 65 who had a Pap test in the past 3 years	89.9	76.7	80.1
Percentage of women who have had a hysterectomy	27.9	24.0	24.7

 $^{^{}st}$ From the 2010 Survey not the 2013 survey.

Technical Notes

2010 U.S. CENSUS DATA

The 2010 U.S. Census data provides the official counts of the population and housing units for the nation, counties, cities and towns. In the past, short and long forms were sent out every ten years. Now, only the short forms are sent out every ten years. Information collected on the long forms in the past are now asked on the yearly American Community Surveys. 2010 Census data is shown for the population in various breakouts to show the official counts by Zip Code Tabulation Areas, county and state level.

AMERICAN COMMUNITY SURVEY DATA

The American Community Survey (ACS) data is released in one-year, or five-year estimates depending on what level of data is shown. Traditionally, short forms and long forms were sent out to addresses every 10 years. The American Community Survey was designed to replace the long form and it is now sent to only a sample of the population each year instead of every ten years, so that ongoing estimates may be available. The ACS reports contain estimates, not the official counts. The U.S. Census states that you should not compare 2010 Census numbers to ACS data; they also suggest that you only compare ACS data when the data are different sets of years. Therefore, to compare 2005-2009 ACS data you would not compare it with any other set until the 2010-2014 data is released. Three year estimates have been released in the past but are no longer being released. Individual sets of years of data for the ACS may be compared to each other. Please remember that the ACS data are not the actual count but a sample of the population over the selected time period. For more detailed information on the American Community Survey please refer to https://www.census.gov/programs-surveys/acs/guidance/comparing-acs-data/2014.html.

Since previous data that was collected on the old long forms were not collected during the 2010 official counts, there is no data from that point for education levels and income information in the 2010 counts. The income information and education data estimates are shown from the latest ACS. Various other data from the latest ACS are included in this report as well to show the latest estimates. To be able to compare Zip Code Tabulation Area level data, data from the five-year estimates has to be utilized.

AVAILABILITY OF SERVICES

To show various services that are available to persons in the county, rates are shown for the acute care hospital beds, nursing home beds, various types of doctors and dentists and dental services.

AVOIDABLE DISCHARGES/INPATIENT HOSPITALIZATIONS

Avoidable discharges are based on the ACS Conditions study done by John Billings. Only discharges for the less than 65 population are looked at. The codes are listed at http://wagner.nyu.edu/chpsr/acs_codes.pdf.

AVOIDABLE EMERGENCY DEPARTMENT (ED) VISITS

Avoidable emergency department visits are based on the NYU Algorithm. ED visits are classified into four categories based on the NYU Algorithm: (1) Non Emergent, (2) Emergent/Primary Care Treatable, (3)

Emergent/Emergency Department Care Required But Preventable/Avoidable and (4) Emergent/Emergency Department Care Required Not Preventable/Avoidable. Therefore the first three categories were combined to create the total number of Avoidable ED Visits. This data is based on all ED visits no matter what the age of the patient.

BEHAVIORAL RISK FACTOR SURVEILLANCE SYSTEM (BRFSS) DATA

The Florida Department of Health conducts the Behavioral Risk Factor Surveillance System (BRFSS) with financial and technical assistance from the Centers for Disease Control and Prevention (CDC). This state based telephone surveillance system collects self-reported data on individual risk behaviors and preventive health practices related to the leading causes of morbidity and mortality in the United States. BRFSS indicators are summarized only at the state and County level.

BIRTHS

Various birth, infant deaths are shown for the maternal and child data. Data by race is shown for comparison. Low birthweight births, very low birthweight births are shown as well as teen birth rates and repeat birth rates. Trimester of care services and when they were started are also shown for comparison. Payor sources for the deliveries are shown as well. Data is shown when available as well by zip code levels. Rates are mostly based on per 1,000 live births unless stated as a percent of total births or per a certain stated population.

BUSINESSES

Data for business sizes and selected types are shown from the latest County Business Patterns produced from the U.S. Census Bureau.

COUNTY HEALTH RANKINGS

The County Health Rankings are a key component of the Mobilizing Action Toward Community Health (MATCH) collaboration project between the Robert Wood Johnson Foundation and the University of Wisconsin Population Health Institute. Counties receive a rank relative to the health of other counties in the state. Counties having high ranks, e.g. 1 or 2, are considered to be the "healthiest". Health is viewed as a ultifactorial construct. Counties are ranked relative to the health of other counties in the same state on the following summary measures:

- I. Health Outcomes--rankings are based on an equal weighting of one length of life (mortality) measure and four quality of life (morbidity) measures.
- II. Health Factors--rankings are based on weighted scores of four types of factors:
 - a. Health Behaviors (9 measures)
 - b. Clinical Care (7 measures)
 - c. Social and Economic (8 measures)
 - d. Physical Environment (5 measures)

For more detailed information please check http://www.countyhealthrankings.org/ranking-methods.

CRUDE VERSUS AGE-ADJUSTED MORTALITY RATES

Both the crude and the age-adjusted death rates (AADR) are displayed in this report. Crude rates are merely the actual number of deaths for a given cause for a desired population divided by total number in the desired population and then multiplied by 100,000 to get the rate per 100,000 population, while AADR represent crude rates adjusted to standardize the population distribution effects on the rate.

Although useful for certain purposes, the crude death rate as a comparative measure has a major shortcoming. It is a function of the age distribution of the population at risk. For example, the population at risk in one county may be primarily elderly persons ages 65 and older while the population at risk in another county may be primarily of persons ages 40 to 50. Crude rates are recommended when a summary measure is needed and it is not necessary or desirable to adjust for other factors.

The frequency with which health events occur is almost always related to age. In fact, the relationship of age to risk often dwarfs other important risk factors. For example, acute respiratory infections are more common in children of school age because of their immunologic susceptibility and exposure to other children in schools. Chronic conditions, such as arthritis and atherosclerosis, occur more frequently in older adults because of a variety of physiologic consequences of aging. Mortality rates tend to increase after the age of 40.

Because the occurrence of many health conditions is related to age, the most common adjustment for public health data is age adjustment. The age-adjustment process removes differences in the age composition of two or more populations to allow comparisons between these populations independent of their age structure.

The age-adjusted death rate is a summary measure that eliminates the effect of the underlying Age distribution of the population. The result is a figure that represents the theoretical risk of mortality for a population, if the population had an age distribution identical to that of a standard population. For example, a county's age-adjusted death rate is the weighted average of the age-specific death rates observed in that county, with the weights derived from the age distribution in an external population standard, such as the U.S. Population.

Age-adjustment then allows for the comparison of two distinct populations (for example, Hamilton County versus Florida) which most likely have differing age distributions. The age effects are in essence removed from the rates and the age-adjusted death rate then no longer reflects the actual death rate but is an indicator rate that can be used for relative comparisons.

In the past, the National Center for Health Statistics (NCHS) age-adjusted rates using the US 1940 standard population. Other agencies used the U.S. 1970 Standard. Beginning with 1999 data, federal agencies began age-adjusting to the U.S. 2000 Standard Million Population.

Zip Code level crude and age-adjusted rates are shown in a separate tables and the county rates and Florida rates are shown as well. These data should not be compared to tables that have only county and Florida rates in them. Population sources are different and these rates should not be compared.

DENTAL/ORAL HEALTH

Hospitalizations and Emergency Department (ED) Visits are shown for dental/oral health reasons. ICD 9 Codes 520-529 were used to pull the emergency department visits and the discharges due to dental/oral health issues for data up to September 30, 2015. All possible fields were used in categorizing these visits. The following ICD 9 Codes were used to categorize dental/oral health as preventable for data up to September 30, 2015: 520.5, 520.6, 520.7, 521.0, 521.1-521.8, 522.0, 522.1, 522.4-522.8, 523.0-523.9, 524.3-524.6, 525.1, 525.3, 525.9, 526.4, 526.5, 528.0-528.3, 528.5-528.7, 528.9 and 529.0. For data from October 1, 2015 and forward ICD 10 Codes K00-K14 were used to pull off data for dental/oral health reasons. From the same time frame, ICD 10 codes K02, K03, K04, K05, K060, K061, K062, K08, K12, K13, M276, A690, and K098 were the preventable dental/oral health issues.

EDUCATION LEVELS AND LANGUAGE SPOKEN AT HOME

The number of persons by level of school completed is shown as well as the language spoken in the home and how well English is spoken.

EMERGENCY DEPARTMENT (ED) DATA

For tables with emergency department data please note that this data only includes emergency department visits in which emergency department registration occurs and the patient is not admitted for inpatient care at the reporting entity.

ENVIRONMENTAL HEALTH

Water Supply and fluoridation data is show for environmental issues. Various access to healthy food data is included in the report. Recreation and fitness facility data is also included.

HEALTH PROFESSIONAL SHORTAGE AREAS (HPSA) DATA

HPSAs may be designated as having a shortage of primary medical care, dental or Mental Health Providers. They may be urban or rural areas, population groups or medical or other public facilities. Possible types of HPSA Designations in the area include.

Geographic Single County - Where the whole County is designated as HPSA.

Geographic Service Area - Where portions of a County, or portions of multiple counties, designated as a geographic HPSA.

Population Group - Where a Population within an area is designated as a HPSA.

Correctional Institutions - Federal and State prisons and youth detention facilities.

Comprehensive Health Centers - Entities receiving Section 330 funds to operate comprehensive health centers.

FQHC Look-a-Like - Federally Qualified Health centers certified as meeting 330 requirements but not receiving grant funds.

Rural Health Clinic - Certified as Rural Health Clinics by the Centers for Medicare And Medicaid Services.

HPSA Scores are developed for use by the National Health Service Corps in determining priorities for assignment of clinicians. Scores range from 1 to 25 for primary care And Mental Health, 1 to 26 for dental health. The higher the score, the greater the priority. All Federally Qualified Health Centers and those Rural Health Clinics that provide access to care regardless of one's ability to pay, receive automatic facility HPSA designation. These facilities may have a HPSA score of 0.

HOUSEHOLD TYPES

There are various types of households. A household includes all of the people who occupy a housing unit. (People not living in households are classified as living in group quarters.) A housing unit is a house, an apartment, a mobile home, a group of rooms, or a single room occupied (or if vacant, intended for occupancy) as separate living quarters. Separate living quarters are those in which the occupants live separately from any other people in the building and that have a direct access from the outside of the building or through a common hall. The occupants may be a single family, one person living alone, two or more families living together, or any other group of related or unrelated people who share living quarters.

A family includes a householder and one or more other people living in the same household who are related to the householder by birth, marriage, or adoption. All people in a household who are related to the householder are regarded as members of his or her family. A family household may contain people not related to the householder, but those people are not included as part of the householders family in census tabulations. Thus, the number of family households is equal to the number of families, but family households may include more members than do families. A household can contain only one family for purposes of census tabulations. Not all households contain families since a household may be comprised of a group of unrelated people or of one person living alone. For more detailed explanation please see http://www2.census.gov/programs-

surveys/acs/tech_docs/subject_definitions/2014_ACSSubjectDefinitions.pdf

IMMUNIZATIONS

The number of kindergartners and seventh graders that have been immunized are reported.

INCOMES

Various income data is shown by zip codes and levels from the latest 5-year ACS estimates.

INFECTIOUS DISEASES

Rates for gonorrhea, chlamydia and infectious syphilis, HIV and AIDS cases are shown as well as rates for vaccine preventable diseases.

INPATIENT HOSPITALIZATIONS

A general overview of discharges and patient days are shown by Zip Code level. Payor sources for these discharges are also shown for the county residents. The top leading MSDRGs are also shown for the County residents.

LICENSED HEALTH CARE FACILITIES AND PHYSICIANS

Various types of health care facilities that are available in the areas are listed. Dentists and selected types of physicians are also listed.

MEDICALLY UNDERSERVED AREAS & POPULATIONS (MUAS & MUPS) DATA

MUAs may be a whole county or a group of contiguous counties, a group of county or civil divisions or a group of urban census tracts in which residents have a shortage of personal health services. MUPs may include groups of persons who face economic, cultural or linguistic barriers to health care.

Possible types of MUAs & MUPs Designations in the area include.

C = Whole County

T = Census Tract

MUAs And MUPs score is the Index of Medical Underservice (IMU) score. The lowest score (highest need) is 0; And the highest score (lowest need) is 100.

Source. http://bhpr.hrsa.gov/shortage/muadatadict.htm

MENTAL HEALTH

Hospitalizations and Emergency Department (ED) Visits are shown for mental health reasons. MSDRGs 876, 880-883, 885-887, 894-897 are used for hospitalizations. For data up to September 30, 2015, ICD 9 Codes 290-316.99 were used in determining mental health reasons to the emergency department after September 30, 2015 and forward, ICD 10 codes F00-F69 and F80-F99 were used to pull the mental health visits. Involuntary Exam Initiations (Baker Act) data is shown as well for the mental health section. Domestic Violence data is also shown.

POVERTY

The U.S. Census Bureau provides poverty estimates through the Small Area Income and Poverty Estimates (SAIPE). Data shown is for all ages in poverty as well as children under age 18. To compare poverty at the Zip Code level, the ACS estimates are shown for various age groups and various levels of poverty.

SMALL AREA HEALTH INSURANCE ESTIMATES

In previous Small Area Health Insurance Estimate (SAHIE) releases, uninsured was defined from the Annual Social And Economic Supplement to the Current Population Survey (CPS ASEC) and the question was for being covered "Some Time During the Past Calendar Year". With the 2008 release from the Census, the CPS ASEC data were replaced with American Community Survey (ACS) data. The ACS health insurance question

asks, "Is this person CURRENTLY covered by [specifically stated] health insurance or health coverage plans?" In 2010, the age group 50-64 was added to the various age group breakouts in the SAHIE. The Census does not recommend comparing the 2008 and newer data to previous-year SAHIE estimates.

UNEMPLOYMENT

The latest unemployment monthly and yearly rates are shown for the county. This data is from the Florida Research and Economic Database.

ZCTAS AND ZIP CODES

The United States Census Bureau collects data by United States Postal Service (USPS) zip codes. Based on zip code data the Census Bureau then aggregates Zip Code Tabulation Area (ZCTAs) from addresses contained within each block. This allows the aggregated data to be converted into areal feature datasets (ZCTAs). For complete information, please see http://www.census.gov/geo/reference/zctas.html.

Below is a table that shows all zip codes in Lafayette and Suwannee Counties along with the city name, percent of the zip code addresses in the county, whether or not the zip code is a post office box or a unique zip code and whether or not the post office box or unique zip code is included with another zip code's information. As you can see in the table there are multiple zip codes from surrounding counties that cross into Lafayette and Suwannee Counties but are not shown because of the small percentage of addresses considered to be Lafayette and Suwannee Counties. Please see the table for a complete listing of those zip codes. Because zip codes can cross lines the tables include a Suwannee County number as well as a total for the zip codes in each respective county that is listed in the table.

Zip Code	City	County	Post Office Box or Unique	Included With Another Zip Code	Percent of Zip Code That is Within Respective County
32066	Mayo	Lafayette	No	No	100
32013	Day	Lafayette	Yes/ PO	32066	100
32008	Branford	Suwannee	No	No	71
32060	Live Oak	Suwannee	No	No	100
32062	McAlpin	Suwannee	No	No	100
32064	Live Oak	Suwannee	No	No	100
32071	O'Brien	Suwannee	No	No	100
32094	Wellborn	Suwannee	No	No	93.5
Zip Co	des That Are Part	ially In Suwanne	e County But Not	Included in Tabl	es in Report
32024	Lake City	Columbia			10
32055	Lake City	Columbia			3
32096	White Springs	Hamilton			5.6
